

Vita 4-in-1

Because we care!

What are Coronaviruses?

- Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as [Middle East Respiratory Syndrome \(MERS-CoV\)](#) and Severe Acute Respiratory Syndrome (SARS-CoV). A novel coronavirus (nCoV) is a new strain that has not been previously identified in humans.
- Coronaviruses are zoonotic, meaning they are transmitted between animals and people. Detailed investigations found that SARS-CoV was transmitted from civet cats to humans and MERS-CoV from dromedary camels to humans. Several known coronaviruses are circulating in animals that have not yet infected humans.
- Common signs of infection include respiratory symptoms, fever, cough, body ache, loss of smell & taste, fatigue, shortness of breath, breathing difficulties, amongst others. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome, kidney failure and even death.
- We know that the disease is caused by the SARS-CoV-2 virus, which spreads between people in several different ways.
- Officials from the National Institute for Communicable Diseases recently announced that they have detected the B.1.617.2 and B.1.1.7 variants among the South African population.

How contagious is the Coronavirus?

- A person with **COVID-19** may be **contagious** 48 hours before starting to experience symptoms.
- The Transmission Rate (R_0) is estimated at 1.5 to 3.5 which means that:
 - If four people were infected with the new coronavirus.....with an R_0 rate of 1.5, they would infect six more.....who would infect nine more and so on.
 - But with an R_0 rate of 3.5, they would infect 14 more.....who would infect 49 more and so on.
- As of 16 June 2021
 - 13,246 recorded infections on this day
 - 8,768 infections on a 7 day average
 - Total cases stand at 1.77m
 - 58,223 deaths recoded to date

How is SARS CoV 2 and related variants spread?

- Current evidence suggests that the virus spreads mainly between people who are in close contact with each other, typically within 1 metre (short-range). A person can be infected when aerosols or droplets containing the virus are inhaled or come directly into contact with the eyes, nose, or mouth.
- The virus can also spread in poorly ventilated and/or crowded indoor settings, where people tend to spend longer periods of time. This is because aerosols remain suspended in the air or travel farther than 1 metre (long-range).
- People may also become infected by touching surfaces that have been contaminated by the virus when touching their eyes, nose or mouth without cleaning their hands.

What can I do to minimise the possibility of contracting and spreading Covid 19?

- Use Vita 4-in-1 throughout the day
- Spray your hands and face with Vita 4-in-1
- Nasal irrigate with Vita 4-in-1
- Gargle and mouth wash with Vita 4-in-1
- Spray the surfaces around you with Vita 4-in-1
- Wear a mask that covers the nose and mouth
- Maintain a safe distance from anyone who is coughing or sneezing
- Cover your nose and mouth with your bent elbow or a tissue when you cough or sneeze
- Stay home if you feel unwell
- If you have any symptoms, seek medical attention

What is VITA 4-in-1?

- Vita 4-in-1 is a safe and effective disinfectant and sanitising agent that provides proven protection against ALL pathogens
- Vita 4-in-1 is the only product that can safely and effectively be used to disinfect the Points of Infection (**face, nose, mouth and eyes**)
- Vita 4-in-1 is:
 - 100% Safe
 - 100% Effective
 - 100% Non-toxic
 - 100% Natural
- Vita 4-in-1 is an antimicrobial and regular use can:
 - Reduce upper respiratory tract (URT) infections
 - Reduce the need and dependency on antibiotics
 - Reduce the cost of medical treatment
 - Reduce cross-contamination and infections
 - Reduce downtime and sick leave
- Instilled with Nano AG+ which enhances the product
 - Product remains effective on surface up to 60 days
 - Product remains effective on the face and hands during periods of washing/cleaning
 - Boosts the immune system

What certification does Bsafe HOCl (VITA 4-in-1) have?

Successfully tested according to:

SANS 52176 & 53727 (bacterial 99.999%)

SANS 51650 & 53624 (Fungicidal 99.99%)

SANS 53704 (Sporicidal 99.9%)

SANS 54476 (Virucidal 99.99%)

Registration

NRCS– 8054/295288/157

SABS 1853:2020/11226/17598

SABS 1828:2017/11226/17599

ATS LABORATORY (USA)

Human Corona Virus Strain 229E (99.994%)

NOSA (SANAS)

EPA Approved

FDA Approved

CSIR Biosciences Molecular & Biomedical Technologies

- Tested BSafe HOCl (Vita 4-in-1) in accordance with SANS 54476 (Virucidal efficacy test for chemical disinfectants used in a medical area)
- Tested against SARS CoV 2, the virus that causes Covid 19
- 99.99% reduction within 1 minute with concentration as low as 50 ppm

Vita 4-in-1 Starter Pack

Blister Pack with 10 x 1g Tablets; 1 tablet per 1 litre

1 Litre Mix & Refill Bottle

Face, Hands & Surface 250 ml Spray Bottle

Mouthwash & gargle 250 ml Pour Bottle

50ml Nasal Irrigate Bottle

Starter Pack Box with Carry Handle

Who to contact for additional information on VITA 4-in-1?

- For additional sales and technical information, please contact:

Morris Nchachi – 061 133 0613 morris@advancedhcs.africa

Trevor Fiford – 082 651 2580 trevor@advancedhcs.africa

- For additional commercial (pricing & payment terms) information, please contact:

Janina Lombaard – 011 869 2142 janina@advancedfst.co.za
